

HTEC VEHICLE LEASING CORPORATION (VLC)

Integrated Services for Zero Emission, Hydrogen-Powered Fleets

HTEC's Vehicle Leasing Corporation (VLC), a wholly owned subsidiary of HTEC, specialises in leasing heavy-duty fuel cell electric trucks (FCETs) to fleet operators.

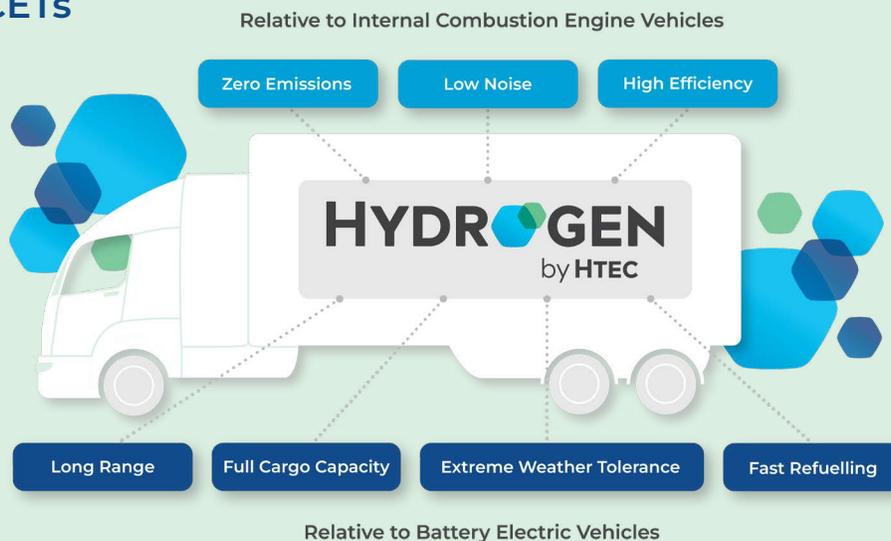

The VLC aims to provide fleet operators with a fully supported, comprehensive service designed to facilitate the integration of FCETs into their fleets.

Our bundled service package includes:

- Leasing of best-in-class, zero-emission, heavy-duty FCETs
- Access to HTEC's network of hydrogen refuelling stations
- Preventative and corrective maintenance services
- Access to fleet data
- Technology adoption support

Benefits of FCETs

The on-road heavy-duty transportation sector is a significant contributor to nationwide greenhouse gas (GHG) emissions, accounting for approximately 9% of BC's total emissions in 2021. When using low carbon intensity-produced hydrogen, FCETs can emit approximately 92% fewer emissions per year than standard diesel trucks.
